1. Overview

The API Gateway (api-gateway) is owned by the Platform Edge team, with Omar Haddad as technical lead. It is implemented in Kong 3.4 with custom Lua plugins and listens on port 443. The dashboards were updated to show saturation alongside latency and errors. Postmortems are blameless and are published within five business days. Database schema migrations must be backward compatible for at least one release.

The dashboards were updated to show saturation alongside latency and errors. Staging mirrors production topology but runs at roughly one tenth of the capacity. The dashboards were updated to show saturation alongside latency and errors. The dashboards were updated to show saturation alongside latency and errors.

2. Data Stores

Primary data store: Redis (gateway-redis) for rate-limit counters. Postmortems are blameless and are published within five business days. Dependency upgrades are batched weekly by the platform bot.

3. Dependencies

API Gateway depends on: auth-service, gateway-redis, all backend services. Tracing uses OpenTelemetry with a ten percent head-based sampling rate. Tracing uses OpenTelemetry with a ten percent head-based sampling rate.

4. Security and Authentication

Authentication mechanism: API Gateway uses validates JWTs issued by auth-service on every external request. All services must expose Prometheus metrics on the /metrics path. The dashboards were updated to show saturation alongside latency and errors.

5. Scaling

Tracing uses OpenTelemetry with a ten percent head-based sampling rate. Remember to tag pull requests with the owning team so reviews get routed correctly. All services must expose Prometheus metrics on the /metrics path. Remember to tag pull requests with the owning team so reviews get routed correctly. On-call handover happens every Monday at 10:00 local time.

Remember to tag pull requests with the owning team so reviews get routed correctly. Feature work is paused during incident follow-up weeks until action items are closed. Every service has a README that links to its dashboards and runbook. Flaky integration tests in CI are tracked on the quality board; please do not just re-run them.

6. Open Questions

Postmortems are blameless and are published within five business days. Feature work is paused during incident follow-up weeks until action items are closed. Postmortems are blameless and are published within five business days.
